Hello Developers of Ultimate++. Greetings and Respect. I think I have a bug in find and replace function of IDE. When I wanted to replace (Ctrl+H) a word in a source code sometimes I have the replace button but sometimes I don't. I am sending two files. This problem occurs when I firstly run (find and replace) function till the end of code but when I re-run second time only Find option triggers not the Replace. I am sending a picture of it..
