Hi!

I see U++ now has a DockWindow class to create dockable windows/controls.

Is it possible to use it using the layout editor?

Thanks

Hi lectus,

Of course layout designer can be used with Docking.

I uploaded a small example for you.

Of course, Docking is intended to be used with dynamically created windows since you can delete them.

But you will get the idea

Thank you!

That's exactly what I wanted.

So, I can see after you draw the DockWindow in the .lay it's basically the same. So, I can have areas in my Window that docking is possible.
