Subject: Save As or Backup or CVS or Uvs2 your files?

I tried to export from "File" menu but I don't want to save the dependant packages.
I want to save (backup) one or several files of my package.
Opinions for "the best practice with u++" or do we need a new feature?

Well, mine (or Tom's) best practice is to sync uvs2 repository before doing large changes

How, then, to "implement" your and Tom's best practice?

It is easy: Just learn how to use uvs2...

However, seriously. I guess that the priority of integrating versioning system in TheIDE is low for two reasons:

1) We are using uvs2 and I in fact doubt that U++ users would like to do so.

2) uvs2 has quite a good GUI (actually, it is a GUI app) to display changes in sources, content etc... so the idea of "GUI encapsulation" of versioning system is not valid there.

First, should supply uvs2 which works...

I compiled it and Microsoft says "Sorry for any inconvienence"... and asks to send a report...
