Hello!
I'm having a bit of trouble adding a Bazaar package.

Is there a direct way of doing that besides moving the package to MyApps folder?

Click on
File -> set main package

In select main package window

right click on MyApps or any desired Assembly

Select edit assembly

Add path to bazaar at the end on 'Package nests' input box.

This way you can add any folders.

example

 C:\UppApps\Apps5523;C:\DevTools\upp5523\uppsrc;C:\DevTools\u pp5523\bazaar;
