Hello,  
I'm not sure whether this is bug or not, but I think I should have posted it to i18n and internationalization.  
I downloaded the stable release of theide and found the console output is unreadable when error occurs. It can't show Chinese characters as expected. The latest svn version can't either. TortoiseSVN indicates that Console.cpp file has a milestone version of 3960, so i downloaded and rebuilt it. Test result is ok with that version. If a semi-colon is missing, e.g, the output should look like this:

and 4965 is ok, too.  
So, what change makes that difference from 4965 on?  
Best regards,  
Wild

Solved by myself! Console.cpp have unnecessary change since r4965.  
line 135: `s = FromSystemCharset(s);` //delete this line  
because `Console::Append()` has already converted `s` to `WString`.  
My OS is Chinese Windows7 and compiler is MSC10.

Ah, thanks, you are right. Anyway, I feel like `FromSystemCharset` is a good idea, so I have moved it to `Append`:

```
WString t = Filter(FromSystemCharset(s), sAppf).ToWString();
```

Please check whether it works for you...

Mirek

Hi,

I just upgrade to 5485, when there is error the IDE console also display unreadable characters.

C:\Users\Danny\Documents\Project\myUppLib\mySqlChannel\mySq lChannel.h:34:27:

I use Windows 7 (Chinese). I just want to see the English Error message. I cannot debug my application without the error messages. Thx.

Danny

For me it doesn't work... Is it possible to disable this feature with "FromSystemCharset"? It works properly only if system language is english.

Hi,

I find the following file, C:\upp\uppsrc\ide\Console.cpp. In line 125 there is a line  
s = FromSystemCharset(s);

I remark this line and run the IDE (5485) but the unreadable characters still exist. Do I need to recompile the IDE. If so how to do it.

Thanks.

Danny

Hello pfsdanny,

You definitely need to recompile IDE.

I think that you can recompile ide from ide on MS Windows. First of all you need to set ide package (uppsrc -> ide). After that you should build ide like any other application. Finally you need to replace old ide exe file with new one.

P.S.

I have never tested above solution, but in my opinion it should work.

Sincerely,  
Klugier

Hi Klugier,

Thanks, I am now switch back to 4193 to complete my project. Will try to comply the IDE when not busy.

Danny
