Hello,  
I have an ArrayCtrl and I set its Ctrls to EditField, Option, DropList, ..etc. I can scroll the ArrayCtrl with the scroll bar without problems but when I scroll with the mouse wheel (which is essential to me) with the mouse cursor over one of the Ctrls it will not scroll.  
I subclassed the Ctrls and made their MouseWheel event to scroll the ArrayCtrl and it work fine but again the problem when the mouse cursor is exactly over any row border it will not scroll and you need to move the mouse slightly away from the border (which is very annoying for long lists).  
Any advice?  
Thanks in advance.

It is because scroll message is processed by the widget, not ArrayCtrl.

Anyway, I agree that in this case, it is not quite good. I guess we will need some solution to this problem. Adding to RM...

Mirek

Should be now resolved by changing default MouseWheel implementation.
