Hi All,

I am building an usc file for my GraphCtrl package and was wondering what the following keywords do:

subctrl (what is the difference with plain 'ctrl')
template

Is it possible to have grouped items in '.usc' ?
For example: I would like to group all the axis parameters together and then easily duplicate them for X and Y axis

subctrl basically means that it is not to be listed in Layout designer.

template means that the widget is created by applying template on some other widget, like WithDropChoice<EditString>.

Hi Mirek,

Thank's for the reply.

I had figured out how to use subctrl a while ago but the use of 'template' might come handy some day.

Another quick question about '.usc' syntax :

what do the @1, @2, ... mean ???

I tried changing them to see if it changes the order of the parameters in the layout designer but no luck
