Hello,

I have a dream. I want my software, connected to a webcam, be able to draw a pixel on the window when something, say a red led, is moving in front of it. So that I could draw moving this led.

I suspect it is not difficult in principle but several library are necessary among which a motion detection one.

Does anybody have a suggestion?

Thanks,
Luigi

Hi Luigi,

I use a GPL software called simply motion. It is a simple, but very powerful tool.

I'm not sure if it can work on windows or if it can be used as library, but perhaps you can get at least some ideas... The sources are just a few files. As far as I can tell it uses v4l and sdl.

Hello Honza!
I use same configuration and wrote player for motion.

But how you are decide problem with multiply usb cameras under linux?

I can use only 1 camera in full size mode. But 2 cameras only in 320x288 px.

(If you use usb camera.)

PS
My SDL player:

PSPS
Now I use analog cameras

I've found 1 variant - recompile uvc kernel driver. But it very difficult for me.

Search is life.....
