Hi!
After building an standard U++ application with MSVC++ 2010 from the Windows SDK which DLLs are required to bundle with the application?

I know U++ is linked statically. Is there anything else I need to be aware?

Thanks

Hello Lectus

As fas as I know, no DLL is required.

You can check required dlls with ldd command if you have cygwin installed.

I checked with Dependency Walker. It showed only systems DLLs which doesn't required distribution.

But I wonder what the VC++ Redistributable Package is for?

Hi all,

if you develop an application using MySql, I think you need to deploy libMySql.dll for dynamic linkage.
