Subject: [maybe bug?] Removing last item in arrayctrl

Hello,

I'm debugging my program.
it's an arrayctrl in the GUI,
I could append row or delete row in the arrayctrl.
But I met a problem. when I remove the last row in the arrayctrl,
all items disappear.

I don't think it's a "feature".

regards,
LeiMing

Hello LeiMing

It seems strange. Could you include a code snippet?

Ultimate++ 5485,
Windows 7 simpified chinese with sp1,
vc 2010 free

this is the project:
http://ftp.sora.info.tm/NsisVPatcherCreator.7z

I'm trying to make a gui for nsis vpatch.
in the "Source files" section, there is an arrayctrl in the right-down corner.
when removing the last row, all rows are removed.

Hello LeiMing

I think you are right.

When deleting rows in a multiselect ArrayCtrl checks the row list in opposite order.

As it is the last one, it moves the cursor to the previous row. But because the removing order, this row is also deleted, and so on until deleting all rows.

Mirek please check:
- bool ArrayCtrl::DoRemove()
- void ArrayCtrl::Remove(int i)
