Subject: SqlArray with Ctrls (in place)

I tried the SqlArray example in the reference and it is working and storing the modifications to the database properly.
When I changed one field to use Ctrls rather than Edit (.Ctrls<EditString>() rather than .Edit(title)) the data was not stored to the database when I close and open again.
All the examples I found is for using external Ctrls, but what I need is to use it in place in the table.
Am I missing something or I need to update the database manually?
Thanks in advance.

Hi,

You should link your ctrls to the database using SqlCtrls.

See

Hi,
Many thanks for the reply.
I think by this method the Ctrls will be outside the table. What I want is to edit the table in place directly with the Ctrls to avoid multiple clicks to start edit in case of using (.Edit)

I think by this method the Ctrls will be outside the table. What I want is to edit the table in place directly with the Ctrls to avoid multiple clicks to start edit in case of using (.Edit)

I am sorry, but SqlCtrls does not support this at the moment.
