Subject: Strange program crash Posted by deep on Wed, 20 Feb 2013 19:57:57 GMT

View Forum Message <> Reply to Message I am facing strange program crash. System windows 7 64 bits, UPP5800, MSC10, Test code. #include <CtrlLib/CtrlLib.h> using namespace Upp; struct MyApp : TopWindow { Image image: #define MAX COL 750 #define MAX ROW 750 struct Node struct Node *Header; struct Node *Left: struct Node *Right; struct Node *Up: struct Node *Down; char IDName; int IDNum; }; struct Node Root: struct Node Roots[MAX_COL]; char Data[MAX_COL][MAX_ROW]; // struct Node Matrix[MAX_COL][MAX_ROW]; void Paint(Draw& w) { w.DrawRect(GetSize(), Cyan()); w.Drawlmage(10, 10, image);

iw.DrawEllipse(0, 0, 100, 40, Yellow());

iw.Alpha().DrawRect(0, 0, 100, 40, GrayColor(0)); iw.Alpha().DrawEllipse(0, 0, 100, 40, GrayColor(255));

ImageDraw iw(100, 40);

}

MyApp() {

```
iw.DrawText(26, 10, "Image", Arial(16).Bold());
 image = iw;
}
};
GUI_APP_MAIN
MyApp().Sizeable().Run();
```

This code runs ok.

When I uncomment line with struct Node Matrix[MAX_COL][MAX_ROW]; Program crashes on run.

Crash report

What can be the mistake?

It seems you have a stack overflow.

The MyApp object with the line uncommented is pretty big. When your program tries to create it on the stack, it may cause a stack overflow. You should generally avoid to allocate objects with this magnitude of size on the stack as stack is more limited than the heap.

Hi Lance,

Thank you for your response.

Now I converted the Array struct Node Matrix[MAX_COL][MAX_ROW]; to Vector of Node. Changed declaration to

struct Node: Moveable<Node>

and

Vector< Vector<xNode>> Matrix:

This is working. I initialize this in for loop.

Now I have another problem.

Actually I am converting some c code to upp.

code in c
struct node *RowHeader[MAX_ROW];

I have declared it as vector.

Vector<Node> *RootHeader;

Now how do I set size to MAX_ROW for this vector?

I tried

RootHeader->Add() in for loop (*RootHeader).Add() in for loop RootHeader->SetCount(MAX_ROW);

What is correct syntax.

Program crashes here with following

Problem signature:

Problem Event Name: APPCRASH Application Name: Test1.exe Application Version: 0.0.0.0

code in c

struct node *RowHeader[MAX_ROW];

more likely translates to

typedef struct node Node;
// actually, in C you need the struct, in
// c++, it can be opted out
// so
// typedef node Node;
// is the same
Vector<Node*> RootHeader;

However, you may want to put the dynamically allocated node* into some smart pointer so that they will be delete'd (free'd).

or you can do it yourself

You don't need to set the size in front.

If you know you will need that many nodes, you may want to Reserve(MAX_ROW);

If for some reason you want the vector to be with that many nodes, you can use the At() method of Upp::Vector, but be advised that your Vector of node pointers will be filled with uninitialized pointers; that's something you don't necessarily want.

C++ containers, eg. std::vector<T> and Upp::Vector<T>, unlike C array, can change its size dynamically to accommodate more elements with ease and with high performance (amortized constant speed). So you can safely ignore the MAX_ROW etc part when you translate C code into C++.

Vector<Node> *RootHeader:

Here RootHeader is a pointer to a Vector <node> object. eg.</node>
Vector <node> nodes;</node>
Vector <node>* RootHeader=&nodes</node>
//or
Vector <node>* p=new Vector<node>();</node></node>
while
Vector <node*> RootHeader; // here on the other hand, RootHeader if a Vector of pointer to Node objects. Vector can be thought of as dynamic array.</node*>
