Hello,

i've got a problem with the installation of TheIDE on Scientific Linux.

When i'm installing it there's this message :

```
CtrlLib/TrayIconX11.cpp:9:34: error: libnotify/notify.h: No such file or directory
```

scope

```
gmake[1]: ***  
[_out/CtrlLib//home/upp/Scripts/GCCMK.bm-Gcc-Gui-Linux-Posix-Shared/TrayIconX11.o] Error 1  
gmake[1]: Leaving directory `/home/benjiboy/upp/uppsrc'  
cp: cannot stat `uppsrc/ide.out': No such file or directory  
make: *** [all] Error 1
```

Can anyone help me for this ?

Hi BeNjIBoY,

Welcome to the forum

You are missing the development libs for libnotify. You need to install libnotify-devel package using your favorite package manager (not sure what is used in Scientific Linux).

Best regards,
Honza

Best regards,
Honza
Thank you,

But now that i've downloaded the libnotify-devel, it is doing those errors :

plugin/bz2/bz2upp.cpp:7:20: error: bzlib.h: No such file or directory

```
gmake[1]: *** [_out/plugin/bz2//home/upp/Scripts/GCCMK.bm-Gcc-Gui-Linux-Po
six-Shared/bz2upp.o] Error 1
gmake[1]: Leaving directory `/home/benjiboy/upp/uppsrc'
cp: cannot stat `uppsrc/ide.out': No such file or directory
make: *** [all] Error 1
```

Seems you're still missing some of the development packages. The complete list of the necessary packages should be this:

```
gtk2-devel
pango-devel
atk-devel
```

cairo-devel
xorg-x11-devel
freetype2-devel
libexpat-devel

Note that some of the names might be slightly different, as this list was taken from OpenSUSE. Also, it is pretty old, so some things might have changed since I never used any of the RPM based distros, so I'm not really well informed about all this :-/

Honza

Okay, 'im trying to download it right now

Thank you !

Thank you for all your answers !
I've resolved my problem.

I've just installed bz2-devel and it works.

Thank you
