Hello all

I would like to improve text quality using Painter for small texts.

In the image it is the same screen with Draw and Painter. The small texts in the X axis (Jan, Feb, Mar, ...) look better with Draw.

This is the code for both:

```
void DrawText(Draw &w, double x, double y, int angle, const String &text, Font font, Color color) {  
    w.DrawText(fround(x), fround(y), angle, text, font, color);  
}  
  
void DrawText(Painter &w, double x, double y, int angle, const String &text, Font font, Color color)  
{  
    w.Begin();  
    w.Translate(x, y).Rotate(-angle*M_PI/1800.);  
    w.Text(0, 0, text, font).Fill(color);  
    w.End();  
}
```

Do you know how to improve the quality?

Hi Koldo,

Small fonts always look ugly when they're anti-aliased. I'd suggest to round the values for the painter variant as well, it can make a huge difference:

This preview was generated using this code:

```
void TextTest(Painter& sw) {  
    sw.DrawText(10,100, "Hello world! // DrawText()", Roman(12), Black());  
    for(int i=0; i<=5; ++i)  
        sw.Text(10+0.2*i, 120+i*20, Format("Hello world! // Text() shifted %2vf pixel left", i*0.2),  
        Roman(12))  
            .Fill(Black());  
    for(int i=0; i<=5; ++i)
```

```
    sw.Text(300, 120+i*20.2, Format("Hello world! // Text() shifted %2vf pixel down",i*0.2),  
    Roman(12))  
    .Fill(Black()));  
}
```

Also, you're pictures seem like there are errors in the letter spacing. Not sure where that comes from, I couldn't reproduce it on my system... I think you can safely use DrawText() everywhere, or do some compromise, e.g.

```
void DrawText(Painter &w, double x, double y, int angle, const String &text, Font font, Color color) {  
    if(font.GetHeight()>15) {  
        w.Begin();  
        w.Translate(x, y).Rotate(-angle*M_PI/1800.);  
        w.Text(0, 0, text, font).Fill(color);  
        w.End();  
    } else  
        w.DrawText(fround(x), fround(y), angle, text, font, color);  
}
```

Best regards,  
Honza

EDIT: Corrected image and code

Hello Honza

I like your proposal. Using it I get this:

The letter spacing is solved although the look remains worse than the original Draw.

Initially I shifted the texts some tenths of pixel but now the results IMHO are not significantly improved.

I think that if it is not possible to improve this in the next future I will paint the texts using Draw over the graphs drawn with Painter.

Hello all

Problem solved. Now all ScatterCtrl texts are drawn using Draw even using Painter to plot. For ScatterDraw all is drawn using Painter.

Hello Koldo,

Great job

Regards  
Biobytess
