[View Forum Message](#) <> [Reply to Message](#)

```
Smtplib::AddHeader(const String& text)          { add_header << text << "\r\n"; }  
Smtplib::AddHeader(const char *id, const String& txt) { add_header << id << ": " << txt <<  
"\r\n"; }
```

should be:

```
Smtplib::AddHeader(const String& text)          { add_header << text << "\r\n"; return  
*this; }  
Smtplib::AddHeader(const char *id, const String& txt) { add_header << id << ": " << txt <<  
"\r\n"; return *this; }
```

(version 5485)

Update to a later version, it is up to 6078 now.

What file and the line number?

What problems are you having the way it is or the compiling error?

When invoking Smtplib::AddHeader I got the error:
"AddHeader must return a value"

(because it is an inline function you only get the error if the function is actually used, which is probably why it was overlooked)

core/smtp.h Line 69 and 70

I got no compilation problem after I added return *this; to the functions, which is obviously what was intended.

Should be now fixed.

Mirek

I can't always use the newest version because I work in a team, but I'll check the latest version before submitting more bugreports.
