Hello Uno

In a grid with EditString columns when the user double clicks on a column without EditString I would like to:
- Get WhenDoubleLeft events
- Avoid to open the first EditString

Now if 5st field has an EditString and user double clicks over the 2nd field, the 5st field is opened. And, because of it, the grid losts the double click.

A simple solution would be to set in GridCtrl.cpp, line 6579:

UpdateCtrls(UC_SHOW | UC_CTRLS);

Is it possible?

I added GotoFirstEdit method. Simply add:
grid.GotoFirstEdit(false)
to stop going to the first edit in a row when clicking on non editable cell in this row.

GridCtrl already has WhenLeftDouble. Have you tried it?

Thank you Uno

Quote:GridCtrl already has WhenLeftDouble. Have you tried it? Of course. The problem is that the opened EditString captures it.

I see.. Then the only solution is too create you own grid control and override ChildMouseEvent method. I could add callback there but IMO this is too specific case to do that.
You could also try the opposite way and react on double click in control that is attached as editor in grid's column.

Hello Uno

Do you mean that even using grid.GotoFirstEdit(false), the first EditString would capture the LeftDouble?

Hello Daniel

grid.GotoFirstEdit(false) is enough. Edit is highlighted but it does not get neither the cursor nor the focus, so GridCtrl handles the WhenLeftDouble().
