i mean:

convenient when coding!

```
SQL = sqlite3;

SQL.Execute("drop table TEST");
SQL.ClearError();
SQL.Execute("create table TEST (A INTEGER, B TEXT)");

SqlId A("A"), B("B"), TEST("TEST");

for(int i = 0; i < 10; i++)
    SQL * Insert(TEST)(A, i)(B, AsString(3 * i));
```

good idea, but this is actually what I expect the search function to do. when I "grep searchterm" or in less I type "/searchterm" in the terminal, I get all the search-results highlighted, including whatever has been matched by ".*" and such. this is definitely a feature I'd like to see in theide.

so I would rather propose 3 new features: 1)auto-highlight all visible search-results, and 2) automatically start a search for whatever has been selected, and for convenience in that case also 3) some key-combination (like ctrl-g known from mozilla) moves on to the next match without any search-dialogue being displayed -- regardless what is being currently selected after the initial selection. of course the first two features turned off by default, and a menu-enty or even icon for the third ("find next" to continue searching after the search-dialogue is closed) with some shortcut predefined...
