- there was a minor bug when clicking on day in the next month (last line of calendar), the month was set to previous month (e.g. actual months is 6/2013, you clicked on 7/1/2013 and got 5/1/2013)

- WhenWeek callback, when not empty, activates clicking on week number and the first day of clicked week is its argument (it does not change the date)
