How can I set the background color of a line in tables with QTFStr class ?

I have found:

```
QTFStr &ForeColor(String col = "") { format.foreColor = (col == "" ? "0" : col); return *this; }
QTFStr &BackColor(String col = "") { format.backColor = (col == "" ? "2" : col); return *this; }
```

but allow me to color the text or the text background, not the table background.

Regards,  
Matteo

Hi,

I may be mistaking, but the input string is supposed to be in QTF format so the easiest way to get the syntax is use the QTF editor embedded in Upp ide
