Subject: SetParent to SplitterFrame

I have a vertical splitter in SplitterFrame in TopWindow, where
in left is TopWindow:

```
 SplitterFrame sf;
       TopWindow ole;
...
 AddFrame(sf.Left(ole, 200));
    AddFrame(InsetFrame());
```

I'm trying to load opened Excel application in ole:
::SetParent(excelHWND, ole.GetHWND());
but ole.GetHWND() is NULL.

Loading Excel without splitter is ok:
::SetParent(excelHWND, GetHWND());

Yes, by the way, before SetParent always call Open() of main TopWindow.

Maybe the reason is DHCtrl usage instead TopWindow for ole object, but still does not work
