You would need to use Chameleon to do that. See [reference/Chameleon](#).

Or you can develop your own button - easy.

Mirek

Dear Mesimo

In Reference/Chameleon there is a good example of custom buttons.  
It looks like this:

Please try it and tell us if it's OK for your needs.

Dear Mesimo

It's simple. With SetImage(image), you can set an image as the background of a button. You can load the Image from a file or, probably much better, from an .iml file. You have a good tutorial here.

Hello

in attached my code can you see the mistake I made  
its compiled without error but the image is not displayed as background of button ( but\_next )

Hi Mesimo

The code doesn't look bad, although I probably would have done it differently. If you can send in a zipped file a minimal version of your project, I can send it back to you corrected.

Hi Mesimo

It is much simpler, you can just enclose the zipped file in a message in this forum. You will see the "File Attachments option".

Hello Mesimo,

Please rework your example to be more simple. Just operate on one button and image (not several ones). Also optimally, use images from .iml file not from your hard drive. To do, it please follow "Adding images" tutorial.

Please reduce, your example to one window to reproduce the issue and do not use acronyms like BB (Just name it MyWindow etc.).

Klugier

Hello Mesimo

Your demo runs well. I have created a little .jpg file, with the red and black arrow, and it loads it in the button:

```
img_chad = StreamRaster::LoadFileAny("c:\\tmp\\3.jpg");  
if (IsNull(img_chad))  
    Exclamation("Image 3.jpg not found");
```

And in the Paint(), I have included the Klugier advice. For this kind of images, it is better including them in .iml files. I have put one from CtrlLib/Ctrl.iml:

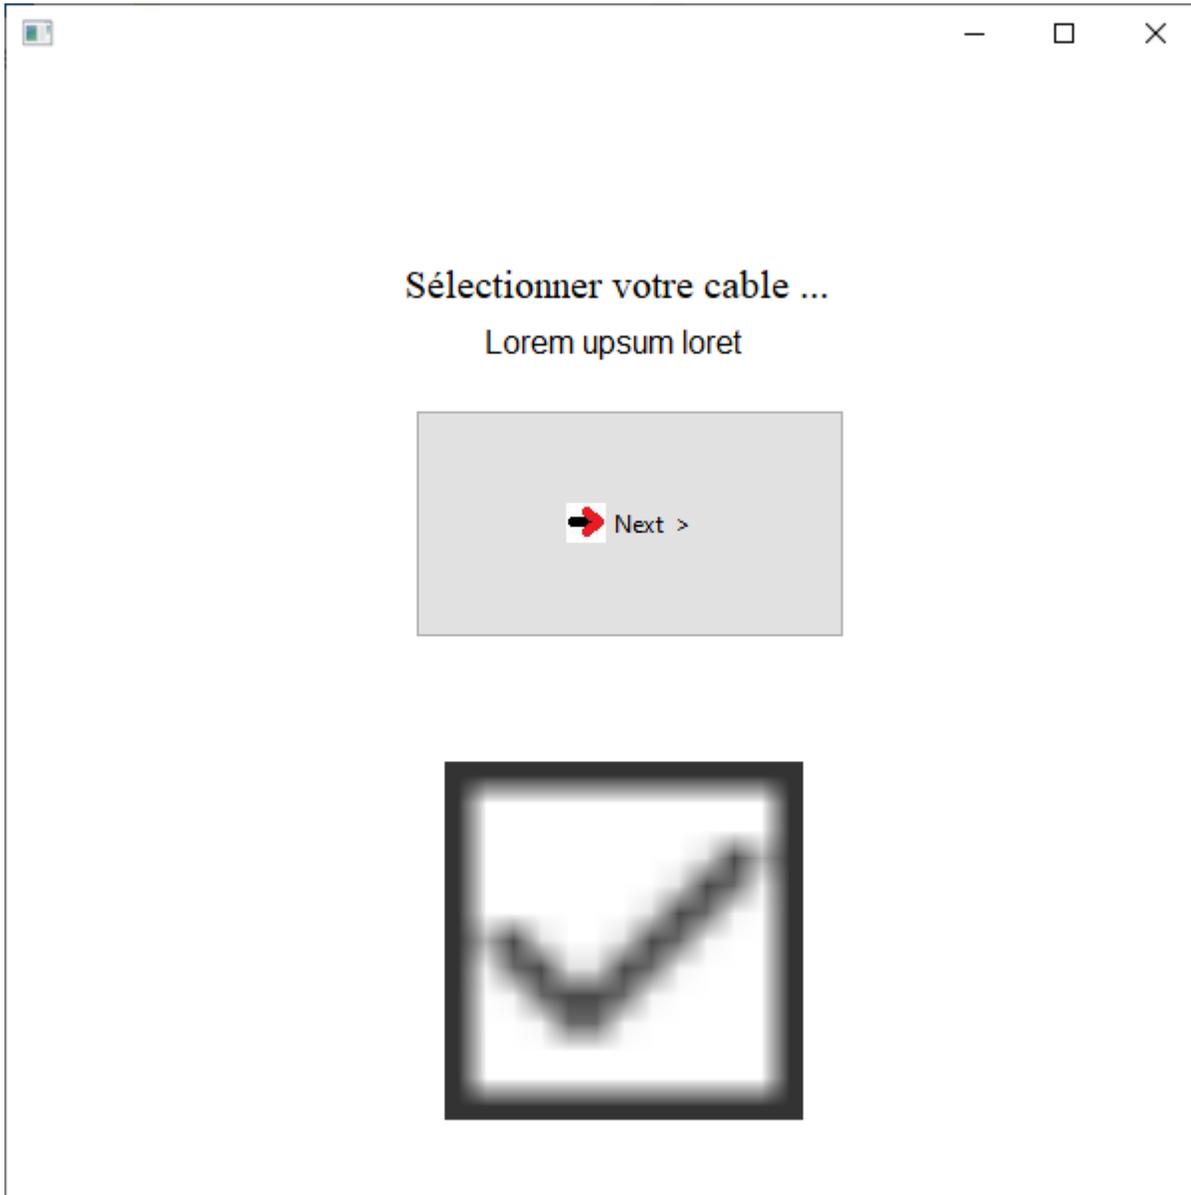

```
w.DrawImage(220, 350,180,180, CtrlImg::O1()/*img_chad*/);
```

Hello Mesimo

Please include a picture of the button as you have it now, and how you would like it to look. In this way, we will unequivocally realise the design you want.

Hello

I WANT to make conditons on 2 buttons with ' if ' I used 2 method and it does not work

```
but_chad << [=]
```

```
but_next << [=]
```

```
if ((but_chad << [=])&& ( but_next << [=]))  
{  
    Next();  
};
```

the result is Eroor Lambda

Hello,

You are doing it wrongly and it is not valid C++. In this case you need to have lambda per button:

```
but_chad << [=] { Next(); };
```

```
but_next << [=] { Next(); };
```

Use this tutorial for reference.

Klugier

Hello Mesimo

You can use "Option", that is the check box in U++.  
For example, if option1 and option2 have been declared as Option, you can do:

```
if (option1 && option2) {  
    Do  
}
```

---
