It is correct? (maybe exists special API for this?)

```
Button::LogPos btnPos = btn.GetPos();
```

```
btn.LeftPos(btnPos.x.GetA(), newWidth);  
btn.TopPos(btnPos.y.GetA(), newHeight);
```

Yes, as long as button is not defined in layout using RightPos or BottomPos (then GetA returns the distance from bottom/right).
