Hi iST1,

The problem is that you change the font. LineEdit is probably (I'm not sure) designed to work with monospace fonts only (anyone else knows more about this?). But GetStdFont returns non-monospace, e.g. DUMP(editCell.GetFont());
editCellSetFont(GetStdFont());
DUMP(editCell.GetFont());on my system logsQuote:editCell.GetFont() = <monospace:16>
editCell.GetFont() = <FreeSans:12>

If you skip the SetFont line, it works as expected. If you really want to change the font, try using some monospaced one...

Best regards,
Honza
