Subject: Icon + text inside ArrayCtrl cell

Hello,

I have a question about customized ArrayCtrl cells. I currently have an ArrayCtrl with two columns, both filled with text. I would like to have the first column contain an icon and the text after it. The icon is HICON format, because I need to retrieve the icon associated to a window enumerated with EnumWindows. If a HICON is NULL, nothing should be drawn.

I am aware of using the Display struct with column specific draw methods. However, I just don't know how to draw this in the control. How can I draw it inside the cells?

Thanks in advance,

crydev

You can assign Display to cell, then draw anything inside it (based on Value/Values).

E.g. you can store ValueMap with "ICON" and "TEXT" keys with appropriate values as cell value, then retrieve this data in your Display and use it to draw the content.

Thanks Mirek,

I have an extra column with the icon of a window in my ArrayCtrl. However, when I move my mouse over it, it zooms the image a bit. I think this is not neat in my situation. Is there a way to disable it?

Thanks in advance!
