I must have been halfway sleeping last night because I had a request like this with a quick-n-dirty patch... I previewed it first, must have forgotten to hit "send" because I can't find my message anywhere...

Well anyway,

This is probably not too important to everyone but I noticed that the build flags couldn't be tested in .rc files. I thought it wouldn't be too difficult to add support so I requested it last night (so I thought).

Meanwhile I did some modifications myself. Files are attached
