hi all,
I have to check if my database tables are empty...
I wrote this control function:

```
bool Impostazioni::ControlloDatabase()
{
 int a,b;

 SQL * Select(ID_TIPOLEGNO).From(TIPOLOGIALEGNO);
 while(SQL.Fetch())
  a = SQL[ID_TIPOLEGNO].GetCount();

 SQL * Select(ID_LEGNO).From(CLASSIRESISTENZALEGNO);
 while(SQL.Fetch())
  b = SQL[ID_LEGNO].GetCount();

 if(a>0 || b>0)
  return true;
 else
  return false;
}
```

it works but... I don't like it, someone can explain me a better solution ?

regards,
Matteo

```
 SQL * Select(ID_TIPOLEGNO).From(TIPOLOGIALEGNO).Limit(1);
 if(SQL.Fetch()) "ID_TIPOLEGNO is not empty"
```
