Hi,

I regularly update my Upp code base from svn (twice today), and I always take a look at what changes have been made by using kdiff3.

Usually there is no problem, but this time (svn 6569), kdiff3 brings up an error message :
Quote:Some input characters could not be converted to valid unicode.
You might be using the wrong codec. (e.g. UTF-8 for non UTF-8 files).
Don't save the result if unsure. Continue at your own risk.
Affected input files are in A, B.

for file: uppsrc/GridCtrl/GridCtrl.cpp (apparently at line 603)

Apparently some bad characters have sneaked in the file
