Hi,

By default IE widget shows all error messages (java script errors etc.):

We can simply make IE quiet using put_Silent function. Koldo, can you add it to IE widget?

```
bool InternetExplorerBrowser::Silent(bool s)
{
 IIWebBrowser webBrowser(this);
 if (!webBrowser)
  return false;

 VARIANT_BOOL vb = s ? VARIANT_TRUE : VARIANT_FALSE;

 if (webBrowser->put_Silent(vb) == S_OK) return true;
 return false;
}
```

I guess it should be turned on by default.

Thank you Zbych

Added bool SetSilent(bool val) to InternetExplorerBrowser and FirefoxBrowser.

In the doc it will appear:

Sets a value val that indicates if the object can display dialog boxes
