Symptom: If you call the Copy method of a GridCtrl while no cell/row is selected, your program will crash because of an assertion failure.

Fix:
Make the following change to SetClipboard in GridCtrl.cpp

```
void GridCtrl::SetClipboard(bool all, bool silent)
{
// skipped many lines

// change this line
 bool row_selected = select_row && IsSelected(curpos.y, false);
// to
 bool row_selected = select_row && curpos.y=>0 && IsSelected(curpos.y, false);
```
