Subject: Help with Lib Wrapper DLL

Posted by jerson on Sun, 15 Dec 2013 05:36:10 GMT

View Forum Message <> Reply to Message

Greetings

I have attached my project with which I cannot seem to access the DLL as the program crashes when I try accessing it. LNPUBLIC makes it worse as it won't compile then.

The class I am interested in is called the PP_ComLib_WrapperClass which is within the DLL called PP_ComLib_Wrapper.dll At this moment, I have tried a lot of things and reached the point of frustration. Can someone please nudge me in the right direction with this?

The least I would like to do is access the Version() export so that I can make it work.

I have a C++ solution that works, but, I cant figure out how to port it to UPP. Any help with this appreciated.

Regards Jerson

Unable to attach the VC++ express solution here. I do not know why the ZIP is being rejected.

So, I have posted the Form1.h which explains the process that seems to work.

#pragma once

namespace psocpgm {

using namespace System;

using namespace System::ComponentModel;

using namespace System::Collections;

using namespace System::Windows::Forms;

using namespace System::Data;

using namespace System::Drawing;

using namespace PP_ComLib_Wrapper; /* this is also the name of the DLL which is added to

Project->References */

```

Hello Jerson

Your dll does not seem to have any Version() function.

In my case when doing dll in C++ I prefer to prepare some interface C functions to access the C++ stuff from outside the dll.

Not sure if it's because the DLL is not created as you had expected.

dumpbin /EXPORTS

on your attached DLL shows something like: 2000 .reloc 2000 .rsrc 16000 .text

You may want do double check if you can use the dll from within another project in visual studio.

Here is a screenshot showing the DLL in the VS object browser. As you can see, it has a whole host of classes within it. One of those classes is the PP_ComLib_WrapperClass (not in screenshot range). Unfortunately, I am unable to attach the VS project here as the ZIP file refuses to upload even though it is under the limit of 8192kb. I can reference the DLL either by VS C++ or VB6 by setting the Project->Reference to the DLL. I will try again to upload the VS project.

Ah, it was the Intellisense file in the ZIP that was causing the problem. It was originally 10mb compressed to 2mb in the ZIP.

I believe I am up against this.

http://msdn.microsoft.com/en-us/library/ms404285%28v=vs.110% 29.aspx see the section "Wrapping COM Objects in a Managed Application"

How can I achieve this in Upp?
