Subject: FileSel file names without quotes

Hello Mirek

Now FileSel uses Catq() so if a file name has spaces, it quotes it so that for example My file.jpg appears "My file.jpg".

This behavior does not seem to appear neither in Windows nor in Linux.

In addition if the file name in FileSel is for example "My file" (with quotes) and for example fs.Type("", "*.png"), the resulting file name is "My file\".pn". This problem does not happen if file name in FileSel:
- does not have quotes: My file
- has quotes but ends with a dot: "My file."

This subject is in function void FileSel::AddName(Vector<String>& fn, String& f).

Could it be possible to remove it?

I believe that the original intent is to make possible to select more files. Anyway, the extension problem is clearly a bug - should be now fixed, please check.

Mirek

Thank you Mirek

It is fixed now.
