As soon as I finish 2.0 version  But you can use 1.04 version if you want. I use it in my apps. 2.0 version is needed because current version dosn't have support for different font sizes. And I wanted to add some useful features like popuped months and years list. See:

fudadmin wrote on Mon, 01 May 2006 14:07Good to know. Thanks!

Actually, one of the block was no chameleon present (e.g. font size is related to that). And chameleon needs new Image....

...which is what I am finishing now.

Mirek

Hi,

nice work with your control.
I tested it with 607-dev3 and got 2 problems:

in main.cpp I had to change line 55 to
Ctrl::ShowRepaint( repaint * 20 );

and in DateTimeCtrl.cpp I hat to change line 449 to
int fh = fnt.Info().GetHeight();

So now it works.
Additionally I added a german translation to the t file.
What I also saw, was the days and months are already defined in Core.t so why not use them.

Greetings
Heli

Hi! This all is already fixed. I also removed unnecessary T_ lines. I will release new version as soon as I come back from my vacation (finally datetime ctrl is font size independant, there is only some chamelonizing work to do..).
