hi,
i was going through the functions in Date class and noticed that
there was no function type for substrating months or years from a given date.
can anybody give me the codes for substrating months or years from a given date?

for example like--

```
Date SubMonths(Date d, int months)
{
  ....
  ....
};

Date SubYears(Date d, int years)
{
  .....
  .....
};
```

thanks and regards,

dave

There is AddMonths, which allows negative month count.

Years are simple (no adjustment because of varying month len involved), just do d.year -= n;
