Subject: Dynamic Libraries __declspec(dllexport)

Hello everybody!

I'm working with windows. I created a headerfile with some classes and functions, but WITHOUT any __declspec(dllexport). Now I get compiler warnings. My Problem is that it would be a pain to include __declspec(dllexport) in every class and Methods and so on. Is there an alternative for global __declspec(dllexport) or something. Furhter I want to write platform independed code, so how do I create a header for windows and for Linux?
Or should I link somehow static? Does anaybody has a good link about this Topic?

Thanks in advance!

Regards

Yeti
