Hello,

Is it possible to load a PNG image into a richEdit document for display and printing? I've browsed the available classes and am unable to resolve if this is possible?

Thanks

Yes.

Actually, you can place any graphics to RichText using RichObject class. PNG is standard RichObject type. Create PNG RichObject by loading PNG into String and constructing it using

```
RichObject("PNG", PngString, size_in_dots)
```

You can then Cat RichObject to RichPara and RichPara to RichText...

Mirek

Thanks Mirek,

Will try this...my C++ is veeerrry rusty, so will get back when I get it going!
