Hello,

I thinkt that current IDE CSS higlight is not very good, because it depends in too many ways on C++ highlight. So, I decided to imrpove it a little bit.

Please leaving reviews. Thanks in advance.

P.S.
In near feature I can write HTML highlight, too.

Sincerely,
Klugier

Thanks, this is fine and it would be great, BUT I think we should improve CodeEditor infrastructure a bit first. It has started as "quick to do C++ highlighter" and I think that it is not particulary well designed for non-curly braces languages....

I think that we need some "Higlighter" class that will separate syntax highlighting from the

CodeEditor. Not that this also involves keeping track of parenthesis and blocks and other features.

Mirek
