Subject: Closing parentheses for arguments list

Hello there!

When I use Assist++ (ctrl + space) to find and insert a method it is pasted with empty pair of parentheses for the argument list. When I finish filling in the argument list I have to move my hand all the way to the arrow keys to move the cursor past the closing parenthesis. It slows me significantly and irritates even more. Is it possible to configure the IDE to either omit the parentheses completely (or at least the closing one) or to make it move cursor past the closing parenthesis when I input ')' (instead of just leaving a stray parenthesis after the cursor)?

Thanks for help in advance.

EDIT: Nevermind. 2000 lines later and I got used to it the way it is. Sorry for littering the forum.
