Hello,

I need a program that protects an application by a serial number. That number should unlock the program for a limited time period.

I looked for it in internet and I am quite confused. Do you have some experience with some locker program compatible with U++?

Thanks,  
Luigi

Hi Luigi,

Have you looked at Protect package published by Max (mdelfede)? It is available in bazaar and provides quite sophisticated way to lock some parts of application so that only people with correct key can access it...

Best regards,  
Honza

Hi Honza,

I was not aware of it.  
It looks interesting. Unfortunately it does not operate in some time interval but forever.

Thanks,  
Luigi

Judging by this post, it looks like it can use time restrictions ;) Perhaps the documentation you read is outdated or incomplete... Max will definitely tell you much more when he sees this post ;) I have used this package only experimentally, so I don't know much about it myself...

Honza
