Hi,

I used to regularly check what's going on in the upp development using http://www.ultimatepp.org/redmine/projects/upp/repository but recently this has thrown me on to a login page. Could it be possible to return back to showing the recent SVN changes without logging in?

Best regards,

Tom

Hello Tom,

Personally, I don't know anything about the page you are talking about, but you can check development status on Google Code. You can also monitor redmine activity. (It seems that it dosen't show current commits for some reson )

Sincerely,
Klugier

I am sorry about it, but it was temporarily disabled.

There was long going issue about website crashing from time to time. After a long investigation I now suspect that the issue is caused by repository reindexing. Stupid ruby code allocates gigs of memory for that and system goes to swapping hell... To test the theory, I have tried to switch repository browser off.

Anyway, perhaps it would be possible to run some other svn browser on website - suggestions welcomed...

Hi,

OK, thanks for looking in to this issue. And Klugier, your Google Code link works great for my purpose of keeping up with the changes. Thanks!

Best regards,

Tom
