Subject: [Funtions4U] Double definition of MIN

Hi, Koldo,

In bsdiff.cpp, there is a
#define MIN(x,y) (((x)<(y)) ? (x) : (y))
but this was already defined in /usr/include/glib-2.0/glib/gmacros.h (I'm using Linux Mint Maya, and have the same warning with Scientific Linux and CentOS. Probably the same with all Linux distros).

This is not a problem : the definition is similar. It's just causing a warning.

Probably, it's bad to remove this define, as in some case or other OS gmacros could not be included or not have this define. But probably you could add a #indef before ?

Hell Jibe

No problem. I have just changed it. It is only used in that .cpp file. And license permits it.

Thank you.

Hi, Koldo,

koldo wrote on Fri, 27 June 2014 13:07And license permits it.
Ooops ! Sorry : I didn't payed attention and I was thinking that it was your own work.

koldo wrote on Fri, 27 June 2014 13:07 I have just changed it.
Yes, good ! No more warning :)

Thanks.
