Subject: please make min-size of dialogs (fixed size windows) smaller than 768

I have fixed build methods dialogue a bit, and made it a bit more narrow too.
now libs and paths is at the top, where it fits to the executable-names
the general options get a whole line as in the old version, they're important.
debug and release options are side-by-side, only short part of the options is visible.

also I tried to fix build-methods, everything was fixed to top.
reduce your resolution to HD-ready and try it out.
ideally theide should run on a tv-set.
I'd wish the layout-editor would warn when minimum size becomes too big...

Edit: updated to new version

Hi piotr,

I second the ideas of making smaller dialogs and also having a warning in layout designer, when they're too big. I know I'm a miority, but my main machine is 1024x600. It is real pain to have to move the big dialog windows in many programs, often just to be able to close them...

Best regards,
Honza
