an interesting new feature is detecting undefined behaviour. in my debug options I use:

-Og -fsanitize=undefined

where -Og is optimization specialized for debugging. to avoid linking-errors I use the link-option -lubsan

in debug mode. applied to theide I get:

/home/p/upp/uppsrc/Core/BlockStream.cpp:19:23: runtime error: left shift of negative value -1

/home/p/upp/uppsrc/RichText/Txt.h:248:2: runtime error: load of value 96, which is not a valid value for type 'bool'

/home/p/upp/uppsrc/RichText/Txt.h:248:2: runtime error: load of value 223, which is not a valid value for type 'bool'

/home/p/upp/uppsrc/RichText/Txt.h:248:2: runtime error: load of value 209, which is not a valid value for type 'bool'

/home/p/upp/uppsrc/RichText/Txt.h:1:7: runtime error: load of value 70, which is not a valid value for type 'bool'

/home/p/upp/uppsrc/RichText/Txt.h:1:7: runtime error: load of value 114, which is not a valid value for type 'bool'

/home/p/upp/uppsrc/RichText/Txt.h:1:7: runtime error: load of value 101, which is not a valid value for type 'bool'

/home/p/upp/uppsrc/RichText/Table.h:107:9: runtime error: load of value 70, which is not a valid value for type 'bool'

/home/p/upp/uppsrc/CppBase/CppBase.h:222:8: runtime error: load of value 101, which is not a valid value for type 'bool'

/usr/bin/valgrind

/home/p/upp/uppsrc/Core/Color.cpp:164:25: runtime error: signed integer overflow: -16777216 + -2147483648 cannot be represented in type 'int'

/home/p/upp/uppsrc/Core/Color.cpp:167:23: runtime error: signed integer overflow: -187 * 2130706432 cannot be represented in type 'int'

/home/p/upp/uppsrc/Core/Color.cpp:166:23: runtime error: signed integer overflow: 66 * 2130706432 cannot be represented in type 'int'

/home/p/upp/uppsrc/Core/Color.cpp:165:23: runtime error: signed integer overflow: 64 * 2130706432 cannot be represented in type 'int'

/home/p/upp/uppsrc/CtrlLib/MenuItem.cpp:205:27: runtime error: load of value 70, which is not a valid value for type 'bool'

/home/p/upp/uppsrc/CtrlLib/MenuItem.cpp:214:27: runtime error: load of value 70, which is not a valid value for type 'bool'

/home/p/upp/uppsrc/CppBase/CppBase.h:294:9: runtime error: load of value 127, which is not a valid value for type 'bool'

/home/p/upp/uppsrc/CppBase/CppBase.h:222:8: runtime error: load of value 49, which is not a valid value for type 'bool'

I haven't tested much though, but program speed is acceptable.

as for optimizations, the problem with graphite re-organizing loops in theide still prevails.
maybe -lto will at least work a bit better...

also I heard the problem with std::move being needed in every return statement has been solved.
will need to test this too...

well, this particular bug is unrelated. my bug seems to be fixed in 4.9.1, it seems. one really shouldn't believe everything linus posts in a fit of rage, every huge piece of software has some undetected bugs.

just to be clear, I have 2 compilers installed, one gcc version for the kernel and one for theide.
(and maybe the problems I observed were due to mis-configuration of that dual setup.) if I have to debug something, let it better be in my own programs...
