Subject: Problem with syntax highlight on find results window.

When using a dark color scheme for coding, the colors get used on the search results window. This makes characters impossible to read, when the search results window background is of a light color.

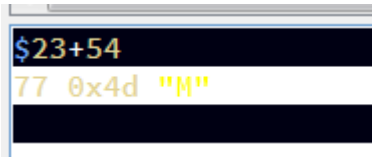

Would it be possible to:

a. Have the search results window have its own color scheme.
or
b. Have the search results window use the same background color as the editor window.
or
c. Add a flag to disable syntax highlight on search results windows.

The same problem happens in the calculator. Except that is shows the current background in the editing. (But not in the results).

The same problem happens in the calculator. Except that is shows the current background in the

editing. (But not in the results).

Perhaps we should rather have "dark" highlighting schema default?

OK, I have now changed code so that if there is "color mismatch" between highlighting and system scheme, it does not highlight in Find Files.

I still thing we should provide "dark highlighting setup" - but ideally I would welcome somebody using black background to do it (I am black on white type of guy...)
