---

Hello,

I am having weird problems that I am not able to explain. Let me spend some words to let you understand my problem.

With my U++ 7282, MSVC 9 compiler, I can compile and run the UWord package.

I would like to use that class in my own app (I like the pdf export function). I splitted the UWord.cpp in a UWord.h that looks like:

```
#ifndef _UWord_UWord_h_
#define _UWord_UWord_h_
#include <RichEdit/RichEdit.h>
#include <PdfDraw/PdfDraw.h>
```

using namespace Upp;

```
##define IMAGECLASS UWordImg
##define IMAGEFILE <UWord/UWord.iml>
##include <Draw/iml.h>
//I use my own pdf icon
```

```
class UWord : public TopWindow {
public:
    virtual void DragAndDrop(Point, PasteClip& d);
    virtual void FrameDragAndDrop(Point, PasteClip& d);
```

protected:

```
RichEdit editor;
MenuBar menubar;
ToolBar toolbar;
StatusBar statusbar;
String filename;
```

```
static LRULList& lrufile() { static LRULList l; return l; }
```

```
void OpenFile(const String& fn);
void New();
void Open();
void Save0();
void Save();
void SaveAs();
void Print();
void Pdf();
void About();
void Destroy();
```

```

void SetBar();
void FileBar(Bar& bar);
void AboutMenu(Bar& bar);
void MainMenu(Bar& bar);
void MainBar(Bar& bar);

public:
typedef UWord CLASSNAME;

void Load(const String& filename);
static void SerializeApp(Stream& s);

UWord();
};

#endif

```

The other file, UWord.cpp, contains the rest of the original UWord.cpp file with, of course, the line

```
#include "UWord.h"
```

The original package splitted in two files continue to compile and run perfectly.

To integrate in my app I have:

- 1) commented  
[code]  
GUI\_APP\_MAIN  
[/code]

in UWord.cpp

- 2) added UWord.h and UWord.cpp to my app;

- 3) added

```
#include "UWord.h"
```

in those few cpp file that use the class UWord.

When compile there are no syntax error. However appear a lot of link error regarding PdfDraw

```

```

Does anybody knows why? It seems there is some collision with my code somewhere. What may prevent PdfDraw to work correctly?

Thanks a lot,  
Luigi

Hi Luigi,

Silly question, but I have to ask first: Do you have PdfDraw added to your package? :) You'll also need RichEdit, plugin/jpg and obviously CtrlLib, as all of them are used by UWord.

If that is not the problem, we can investigate further..

Best regards,  
Honza

Hi Honza,

thanks for reply. In this matter the question are never silly.

To say the truth I missed the plugin/jpg :blush:. After adding it unfortunately nothing changed and the error remained.

I attach a screenshot of the package list of my app and of UWord.h.

In the next post I attach the principal .h of my package. I suspect the problem is in some collision with this include file.

Thanks a lot,  
Luigi

C:\upp\out\MyApps\MSC9.Gui\Vega6.exe : fatal error LNK1120: 22 unresolved externals

```

In the top list I do not see the library PdfDraw.  
Instead if I compile UWord I get

----- CtrlLib ( GUI MSC9 WIN32 MSC ) (1 / 12)  
----- RichEdit ( GUI MSC9 WIN32 MSC ) (2 / 12)  
----- PdfDraw ( GUI MSC9 WIN32 MSC ) (3 / 12)  
----- plugin/jpg ( GUI MSC9 WIN32 MSC ) (4 / 12)  
----- CtrlCore ( GUI MSC9 WIN32 MSC ) (5 / 12)  
----- Draw ( GUI MSC9 WIN32 MSC ) (6 / 12)  
----- plugin/bmp ( GUI MSC9 WIN32 MSC ) (7 / 12)  
----- RichText ( GUI MSC9 WIN32 MSC ) (8 / 12)  
----- Core ( GUI MSC9 WIN32 MSC ) (9 / 12)  
----- plugin/z ( GUI MSC9 WIN32 MSC ) (10 / 12)  
----- plugin/png ( GUI MSC9 WIN32 MSC ) (11 / 12)  
----- UWord ( GUI MAIN MSC9 WIN32 MSC ) (12 / 12)

Linking...

C:\upp\out\examples\MSC9.Gui\UWord.exe (1819136 B) linked in (0:03.58)

OK. (0:04.46)

So PdfDraw is compiled in UWord. Why in my app there is no PdfDraw? How can I force it to appear?

Thanks,  
Luigi

Hi Honza,

Solved!

after your question I added "PdfDraw" in the app.upp file and it worked!  
I do not know why it was non included automatically.

Thanks a lot!!!  
luigi

Hi Luigi,

Congratulations to solving it on your own :)

I think it happened like this: On your screenshot above, I can see PdfDraw among the packages. This fooled you into thinking that it is compiled in your package, but actually, the PdfDraw was only conditionally included by CtrlLib (which uses it on non-windows systems). So it was shown there, but not compiled, because you were building on windows. Adding it to your package just made it unconditional.

It is always a good idea to add every package you use into the dependencies, even if some other package already provides it. It improves readability and saves trouble later, when other packages dependencies change or when you try to reuse package in another project ;)

Best regards,  
Honza
