Subject: Weird error when compiling projects

Hi Friends,

Since some UPP updates (I cannot remember exactly which version exactly but at least SVN7572),I get the error shown below when the compiling process attains the link step:

"Entry point of procedure inet_ntop cannot be found in library WS2_32.dll"

The problem appears only on my Win XP system not on my Win 7 laptop.

Any idea ?

Thanks in advance for help and comments

Hi,

Just to close this post as Koldo has solved this issue

Hello Koldo,

No problem at all. During this period I tried to understand what could be wrong and as always I

learned a lot from UPP community.

Thanks for your support

Regards
Biobytes
