Hi,

I'm totally unexperienced with XML and have few knowledge about it... Is it possible to generate a XML starting from a XSD and introducing the data ?

Could you point me to some doc explaining how to do and eventually to a library to use in UPP for that ?

Thanks.

Hello Jibe,

Take a look at XSDcompiler it think this may be what you are looking for : XSD ==generate==> C++ code to read/write xml files

Hi, Didier,

Merci !

Is it this compiler you are talking about ? I found also this one, but seems not free.

Yes ! Seems to be exactly what I need ! Did you try it ? Is it working well with UPP ?
