Subject: From XSD to XML

Hi,

I'm totally unexperienced with XML and have few knowledge about it... Is it possible to generate a XML starting from a XSD and introducing the data?

Could you point me to some doc explaining how to do and eventually to a library to use in UPP for that?

Thanks.

Hello Jibe,

Take a look at XSDcompiler it think this may be what you are looking for: XSD ==generate==> C++ code to read/write xml files

Hi, Didier,

Merci!:)

Is it this compiler you are talking about? I found also this one, but seems not free.

Yes! Seems to be exactly what I need! Did you try it? Is it working well with UPP?
