Subject: Debugging via ssh

When trying to use TheIDE through ssh I'm getting a problem with the debugger (old and new). It launches a console with a message "warning: GDB: Failed to set controlling terminal: Operation not permitted".

This behavior was observed with the latest Upp source code compiled on Ubuntu 10.04 LTS (gcc version 4.4.3, gdb version 7.1).

Am I doing something wrong?

Thanks.

I wonder what exactly is above supposed to mean

However this is normal and I believe it is GDB bug. I see that too when debugging console apps in linux. At the moment, I suggest to ignore that and hope GDB team will fix this issue... (otherwise, debugging works for me with GDB).

Mirek

This all is about Linux
1) I'm using ssh to connect to a remote machine.
2) I launch TheIDE and edit and compile code. Everything works fine.
3) But when I'm trying to debug code, debugger just doesn't work. It opens up a new console window with the message above. This is it.

BTW, I'm not getting notifications after the forum software update.

Thanks.
