Subject: Switch feature contribution + StaticText USC file correction

Hello,

1 - Switch feature:

I have a minor feature proposition for Switch widget :
==> make orientation configurable : vertical, horizontal or automatic (like it is now)

I currently use this feature because when changing language, the text length also changes ... and so does the orientation, sometimes making the widget unusable :(

Basically I just added the following methods to Switch class :
```
Switch& SetHorizontal()                 { direction = 1; return *this; }
Switch& SetVertical()                  { direction = -1; return *this; }
Switch& SetAutoDirection()                 { direction = 0; return *this; }
```

2 - StaticText .USC file correction

Just a minor correction to the text painting method : GetTextSize() replaced with GetSmartTextSize()

All code is in joined zip file.
The code corresponds to the svn version 7824 (last svn version at the time of this post)
