Hello,

I can edit my message.t file within TheIde and see all characters in any language included Polish and Russian.

One of my user want to improve the Russian translation. Unfortunately he has not theide. When he open the message.t file appear the usual strange code

...
ruRU("\320\236\321\210\320\270\320\261\320\272\320\260,
\320\277\321\200\320\276\321\205\321\200\320\260\320\275\320 \265\320\275\270\320\270 "
"\321\204\320\260\320\271\320\273\320\260!")
...

that are impossible for him to edit. Is there some smart text editor able to show and edit the correct characters?

Thanks,
Luigi

I have just discovered that JEDIT http://jedit.org/
is able to show the text. The first time it is not able, but with FILE->REOPEN WITH ENCODING -> UTF8 it works.

Luigi
